Please amend the present application as follows:

Claims

The following is a copy of Applicant's claims that identifies language being added with underlining ("___") and language being deleted with strikethrough ("___"), as is applicable:

- 1. (Previously presented) A method for scanning a document, comprising:
 receiving a scan request from a user browser;
 uploading content to the user browser;
 receiving selections made with the user browser; and
 scanning the document in accordance with the user selections.
- 2. (Previously presented) The method of claim 1, wherein uploading content to the user browser comprises uploading logic configured to generate at least one control screen for display within the browser.
- 3. (Previously presented) The method of claim 1, wherein uploading content to the user browser comprises uploading at least one application that is configured to perform a designated task on a computing device on which the browser runs.
- 4. (Original) The method of claim 3, wherein the at least one application is configured to perform optical character recognition on the scanned document.

- 5. (Original) The method of claim 3, wherein the at least one application is configured to locate an optical character recognition module of a computing device on which the browser runs.
- 6. (Original) The method of claim 1, further comprising uploading scanned data to the user browser for viewing.
- 7. (Original) The method of claim 1, further comprising performing optical character recognition on the scanned document.
- 8. (Original) The method of claim 7, further comprising uploading an optically character recognized document to the user browser for viewing.
 - 9. (Original) A system for scanning a document, comprising: means for receiving a scan request from a user browser; means for uploading content to the user browser; means for receiving selections made with the user browser; and means for scanning the document in accordance with the user selections.
- 10. (Original) The system of claim 9, wherein the means for uploading content to the user browser comprises an embedded server.

- 11. (Original) The system of claim 9, wherein the means for uploading content to the user browser comprise means for uploading at least one application that is configured to perform a designated task on a computing device on which the browser runs.
- 12. (Original) The system of claim 9, further comprising means for performing optical character recognition on the scanned document.
 - 13. (Original) A system for scanning a document, comprising:
 logic configured to receive a scan request from a user browser;
 logic configured to upload content to the user browser;
 logic configured to receive selections made with the user browser; and
 logic configured to scan the document in accordance with the user selections.
- 14. (Original) The system of claim 13, wherein the logic configured to upload content to the user browser comprises an embedded server.
- 15. (Original) The system of claim 13, wherein the logic configured to upload content to the user browser comprises logic configured to upload at least one application that is configured to perform a designated task on a computing device on which the browser runs.

- 16. (Original) The system of claim 13, further comprising logic configured to perform optical character recognition on the scanned document.
 - 17. (Original) A scanning device, comprising:

a processing device;

scanning hardware; and

memory comprising a scan control module and an embedded server, the scan control module comprising a scanning module and an optical character recognition module, the scan control module further including logic for generating at least one control screen that can be uploaded to a user browser.

- 18. (Original) The device of claim 17, wherein the memory further comprises at least one application that can be uploaded to the user browser.
- 19. (Original) The device of claim 18, wherein the at least one application is configured to perform optical character recognition on scanned documents.
- 20. (Original) The device of claim 18, wherein the at least one application is configured to locate an optical character recognition module of a computing device on which the browser runs.
- 21. (Previously presented) The method of claim 1, wherein the receiving, uploading, and scanning are all performed by a scanning device.

- 22. (Previously presented) The system of claim 9, wherein all the means are provided on a scanning device.
- 23. (Previously presented) The system of claim 13, wherein all the logic is provided on a scanning device.
- 24. (Previously presented) The scanning device of claim 17, wherein the scanning device comprises a scanner or a multifunction peripheral (MFP) device.
